

WELCOME TO

SMEGMARS

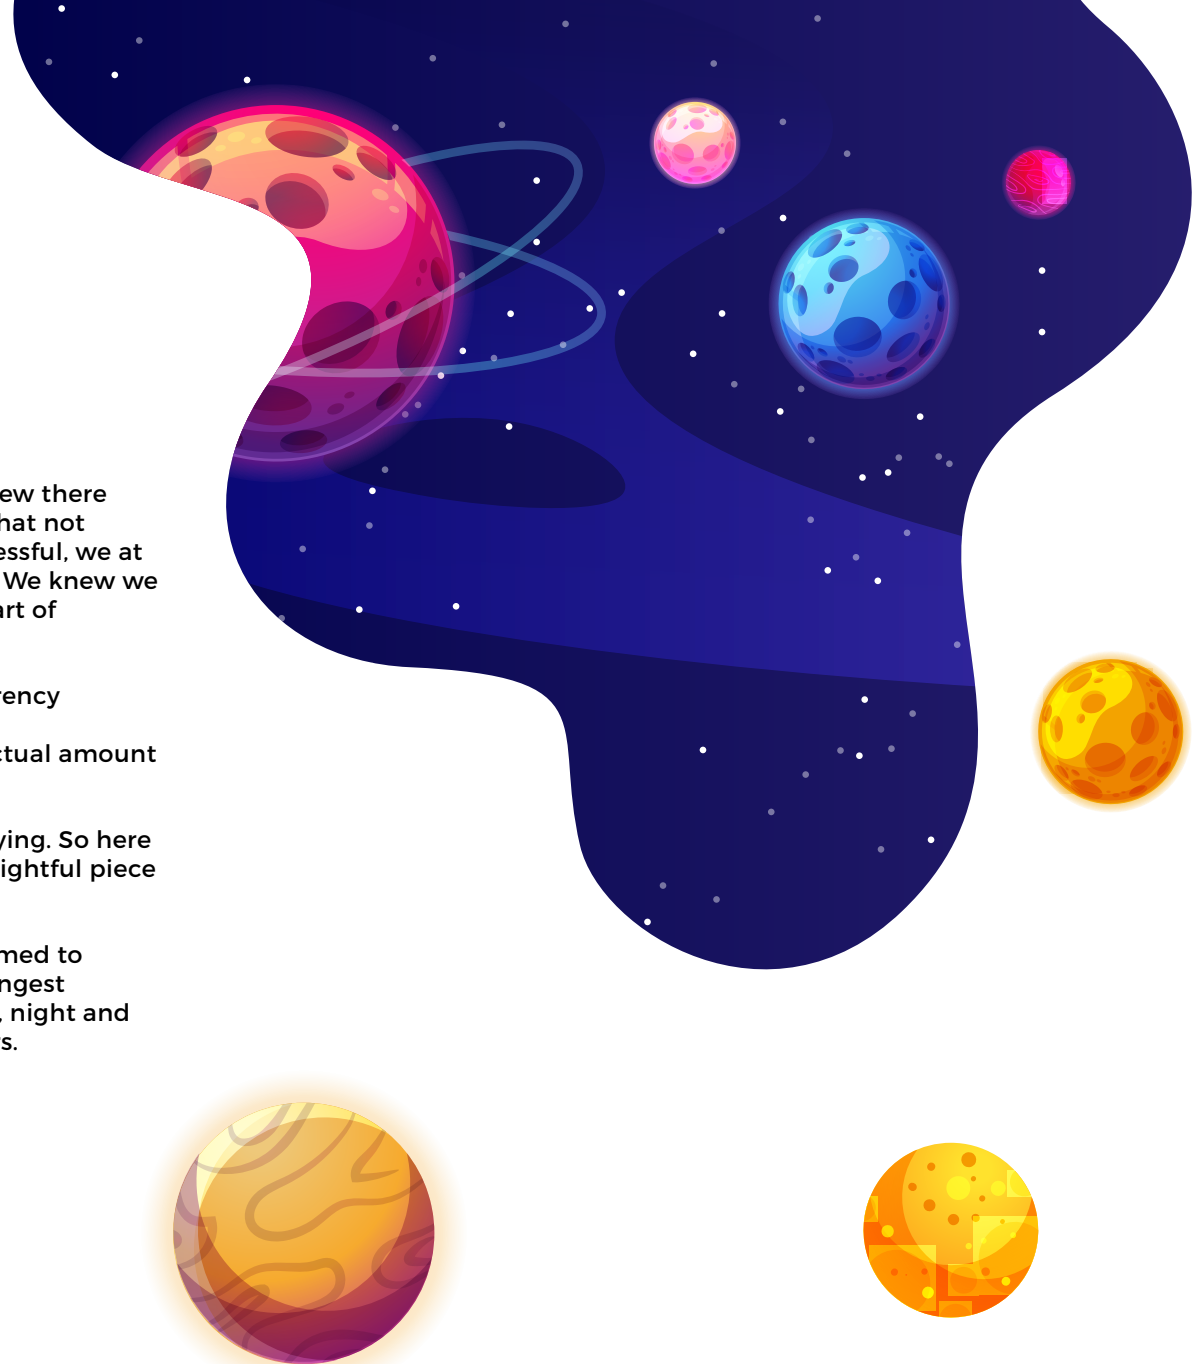

Why SMEGMARS ?

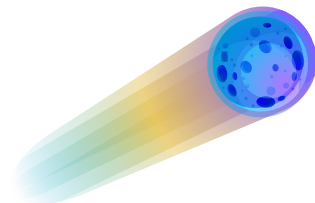

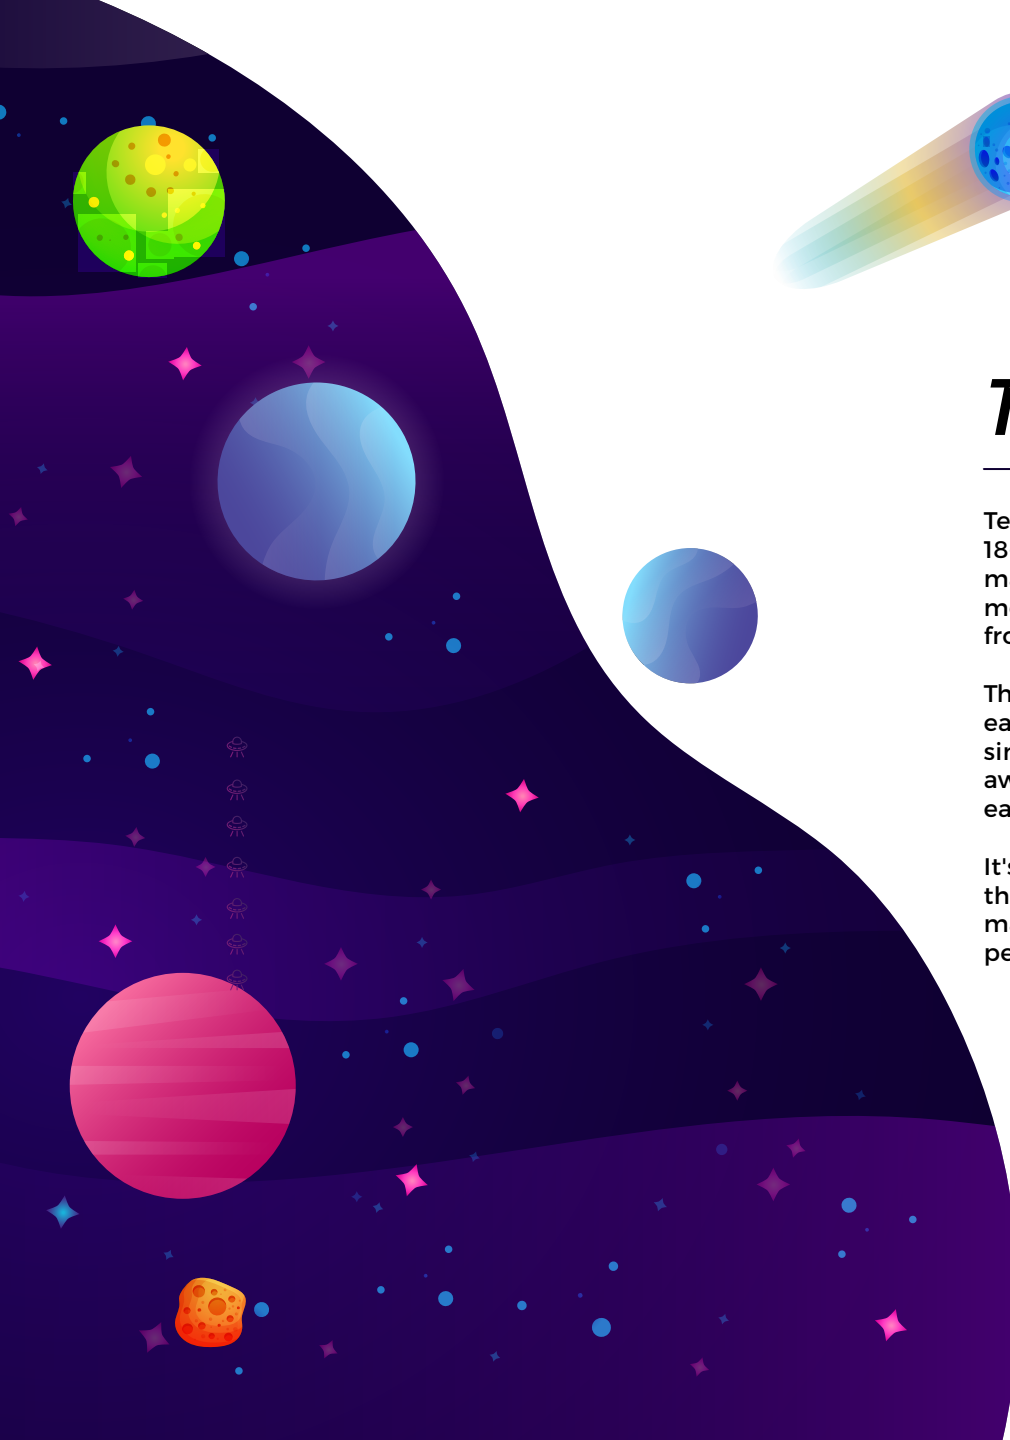

As a group of investors and industry professionals, we already knew there was potential within the alt-coin market. But when we noticed that not many truly knew how to turn this potential into something successful, we at SMEGMARS got together and decided to do something about it. We knew we had to help ordinary investors and give them a chance to be a part of something bigger, a community with a common goal.

We are living in an unprecedented time with so many cryptocurrency investments blasting off. It is currently estimated that the entire cryptocurrency market is valued at \$2 trillion. It now rivals the actual amount of gold held for private investment purposes * 

When people say cryptocurrency is like digital gold, they aren't lying. So here at SMEGMARS, we are on a mission to make sure we secure our rightful piece of the market during this digital gold rush.

While we are not the first nor the last cryptocurrency that has aimed to accomplish such a task, we are different in that we have the strongest community, rife with enthusiastic members who work diligently, night and day, to ensure each and every single SMEG-MARTIAN gets to Mars. We aren't aiming for the moon, we're here to colonize Mars.

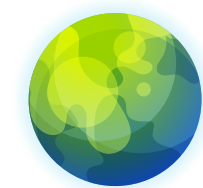

Testicular Cancer Research

Testicular cancer is the most common cancer among young men 18-39. We here at SMEGMARS take that personally. All of us have a male figure in our life who is dear to our hearts. Losing that person means losing part of ourselves. We're aiming to stop testicular cancer from cutting lives short.

The overall survival rate of testicular cancer is 95%. When caught early, the survival rate increases to 99%! This means we cannot simply fund cures, but must tackle it at the root source by spreading awareness early on and encouraging men of all ages to get checked early regularly.

It's time we as a community stand up to cancer once and for all and there's no better incentive to do so than by giving people a chance to make something for themselves financially, while giving back. Its the perfect winning combination.

Investor's Confidence:

When it comes to cryptocurrencies, there are quite literally thousands, making it difficult to choose the right one. It is our belief that we have provided exactly what investors need to feel confident about putting their money into the SMEGMARS project.

- 👤 Ownership renounced 🔒
- 👤 LP locked : ** make sure you connect wallet 🔒
- 👤 Rugscreen check: 🔒
- 👤 No presale: a completely fair launch
- 👤 No Mint functions
- 👤 Automatic deflationary measures ensure your investment becomes worth more with each transaction
- 👤 Maximum transaction sizes of <1% of all tokens generated, reducing the risk of big dumps and whales seizing control.

Understanding The Tokenomics:

1 *Auto-Staking:*

There are limitless ways to invest your money and earn interest. But one of the safest and simplest ways is to deposit your money into a CD (Certificate of Deposit) savings account where you cannot use or remove it for a specified period of time while earning a higher interest rate. In the world of cryptocurrency this is known as “staking.” In auto-staking there is a pool of tokens controlled by the contract and only the contract. These tokens come from the 7% tax on every transaction. These tokens are then distributed among active investors with the percentage shared based on how many tokens you possess. Therefore, just by holding tokens, you continue earning with every transaction that takes place. You also face penalties if you sell early, which discourages “swing-trades” or other price manipulations.

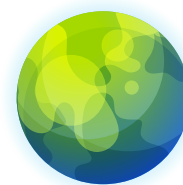

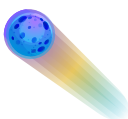

2 **Deflation Via Token Burn:**

A token burn is the process by which a token is sent to a dead address that is not owned or able to be accessed by any individual. This address looks like `0x00dead`. 1% of every transaction incurs a tax like this, which means there are fewer tokens in circulation, making your tokens more valuable with every transaction. We also burned 46% of the initial 10,000,000,000 tokens minted. This means these tokens are not in circulation, nor usable by anyone.

3 **Maximum Transaction Sizes:**

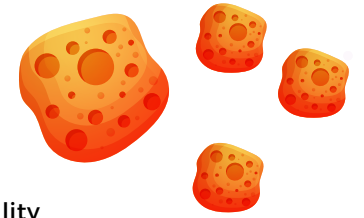

This is one of the most important aspects of our tokenomics, which ensures an “anti-whale” environment. It means that no single buy/sell transaction can be greater than or equal to 1% of all tokens initially minted. This prevents certain individuals with larger amounts from selling all of their tokens at once. This feature is extremely important because wallets holding large percentages of tokens can cause massive panic selling when they suddenly sell off large amounts. This means more price stability and more incentives to hold longer.

Community-Driven:

With the contract being renounced, and fairly launched, this truly becomes a community token where all investors share the responsibility for ensuring the success of this coin. Being a SMEG-MARTIAN is more than just being an investor. The relationship between the community and the development of SMEGMARS is what moves this project, and as we've seen with so many successful tokens, this is paramount to success. Without a community, we are nothing.

Here at SMEGMARS, we have the strongest community around! Every single SMEGMARS investor continues to push this project forward, and continues to motivate and inspire us, every day of this project.

Our-goal:

Our goal is simple, end testicular cancer #SaveOurBalls twitter: . At team  SMEGMARS, we believe everyone deserves a fair chance at making life-changing money. Everyone wants to "go to the moon," but why stop there? Mars is uncharted territory, yet to be explored by humans. So let's be the first ones there to stake our claim during the digital gold rush!

Disclaimer: SMEGMARS does not offer any financial advice, and believes every investor should do their own research before investing in any cryptocurrency.
